3. EXT. FLOWER GARDEN - BEHIND THE FLOWER SHOP - CONTINUOUS

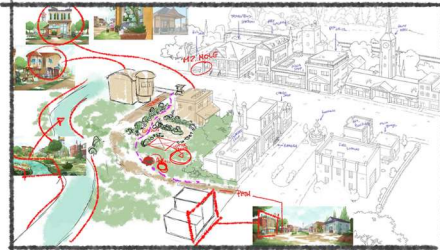

Olive points out her favorite bits as they walk along the pathways between flowers to the larger garden area behind the flower shop. We see many types of colorful flowers, including WHITE ADONISAMIS and PINK HYACINTHS.

OLIVE
(gesturing to some tall white flowers)
This flower is just as beautiful. Isn't that a fun word for such a tall flower?

OLIVE (CONT'D)
But my favorite flower in the whole garden is... Our purple violets!
Olive holds her arm out to showcase a lush grouping of TWO-TONED PURPLE VIOLETS (DESIGN REFERENCE: viola pedata) that she and her mom planted last year, BUTTERFLIES fluttering across frame.

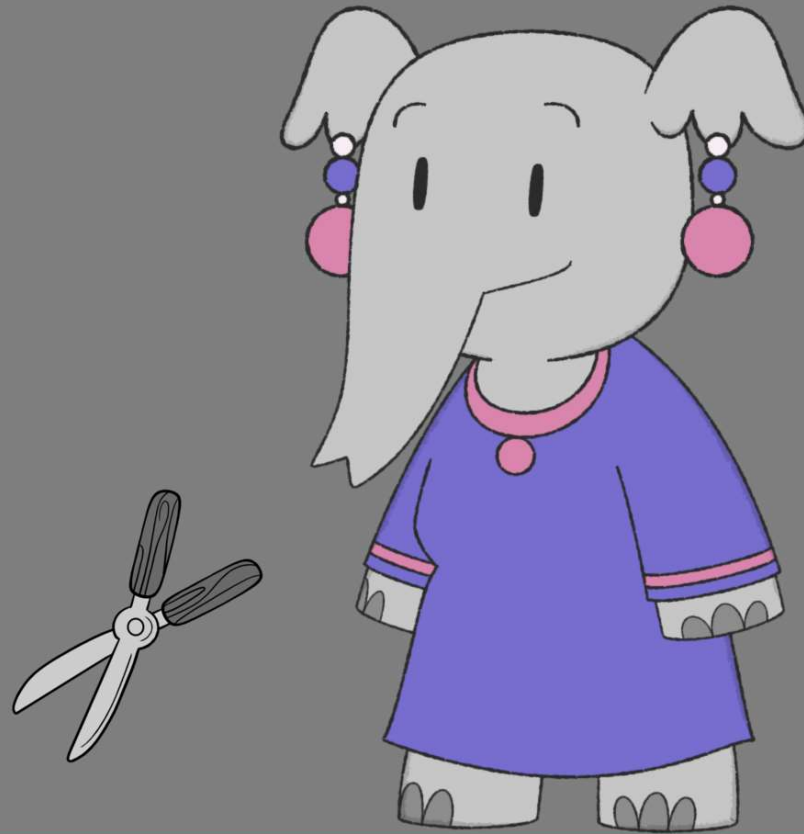

ELINOR
- and there's even a little orange part in the center that looks like a bird's beak!

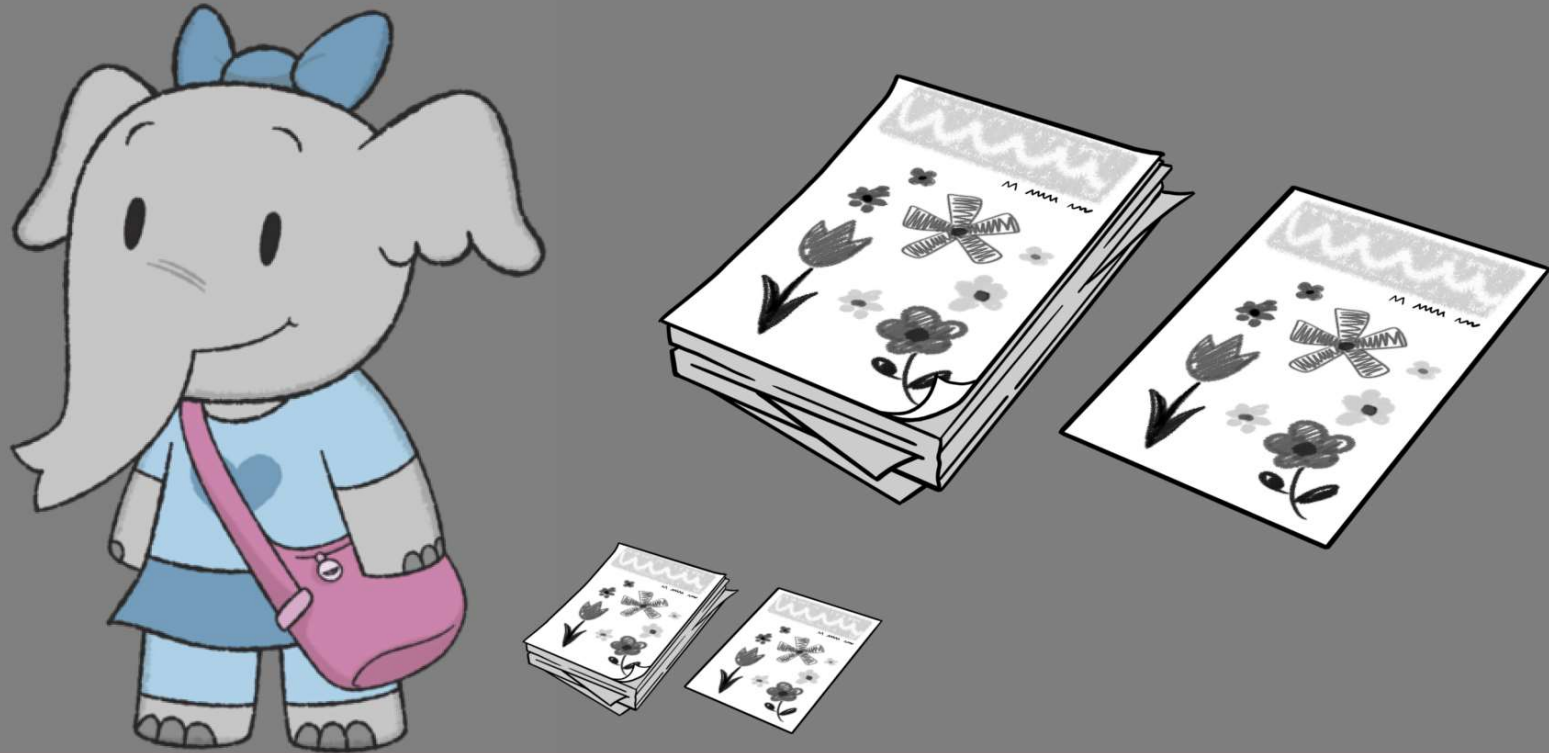

As Olive finishes talking, Elinor sees something out of the corner of her eye - a familiar looking purple flower in a different area (5-10 meters) from the original violet patch.

OLIVE
Maybe there's something about it in
my nature book!

Olive consults her NATURE BOOK, and we ANGLE ON a couple
pages that illustrate some different methods of seed
dispersal.

44

45

OLIVE (CONT'D)
I found it! It says plants use lots
of different ways to spread their
seeds so they can grow in new
places.

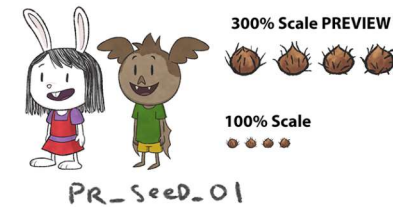

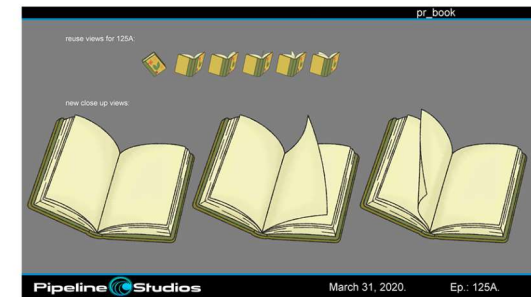

45

She points to the first page, where we see a seed stuck in an
animal's fur, and a fluffy dandelion seed in the wind.

46

OLIVE (CONT'D)
Some seeds stick to animals' fur
and get carried to other places.
Some are light and fluffy so they
get pushed by the wind.

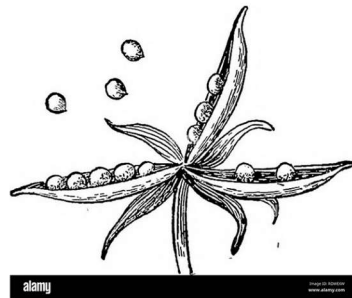

46

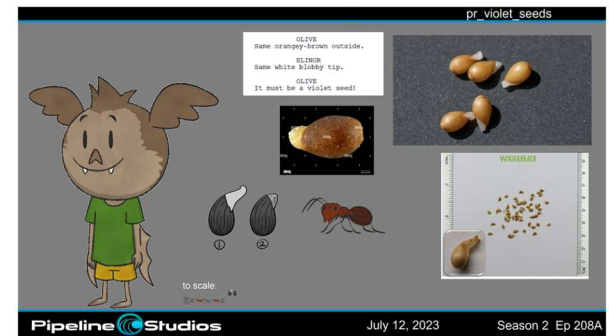

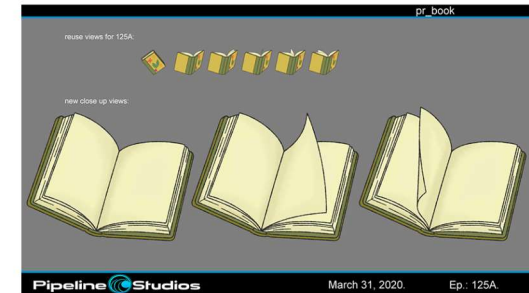

pr_nb_violet_seeds

She gestures to the second page, where we see some familiar pods with seeds being sent into the air.

EMN208A 'Flower Power' Record Draft 7.
47 OLIVE (CONT'D) 47
And some plants have their seeds in a little seed pod. When the pod dries up, it gets so tight that it pops and the seeds fly out!

CLOSE UP 

Scale

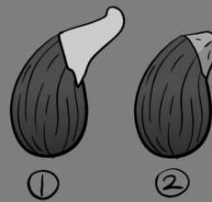

OLIVE
Same orangey-brown outside.

ELINOR
Same white blobby tip.

OLIVE
It must be a violet seed!
